

CLASSIC TUBE RADIO AND AMPLIFIER REPRODUCTIONS

Fender 5E1 Champ Amp head clone

My first kit was built in 1962. Later in High School, I built my first tube amplifier and power supply. Building classic electronics from the 50's and 60's has been my hobby for almost 50 years. I have a Masters Degree in Electronic Engineering. I am retired from the corporate world.

I live in the Central Valley of California. I guess we can call the amplifiers I build "Central Valley Grown". I use vintage and new parts to build the amps, not the most expensive ones! This way, I can build guitar amplifiers at below market price and get them into the hands of a lot of musicians that can't afford a \$1000 Train-wreck! My amplifiers are built to sound great. After they are done, I check every solder joint and connection. The Amp runs for several hours and is tested again before I ship it. It is a great enjoyment for me to satisfy a growing demand for low cost, great sounding amplifiers.
